

# How to select a strong password: 2025-12-14 07:00

First we need to select 2 random pages from this document. Lets do it in the most fun way!. Go to <https://pickerwheel.com/tools/random-number-generator/> (no affiliation). Set the max value of their wheel to 233 (number of pages). Spin the wheel a few times for fun, then settle on 2 random page numbers. Alternatively, you could open a physical book of comparable size, twice at random, to obtain 2 random page numbers.

Next, print only page 1 and your two random pages from this document. Be kind to the environment!

Now we are going to select 6 words from each page. You could select them by using your favorite pattern. For example, how the Knight moves in Chess. Alternatively, we could stick with the number wheel and select 12 coordinates, just sets of numbers. 12 columns (1-6) and 12 rows (1-39). Simply set the max value on the [wheel](#) and go spinning. You could also just randomly stab with a pen 6 words on each printed page. Then underline, circle or highlight them. You could use the highlight functionality of your PDF viewer and simply highlight the words. Then save it to a safe place, [physically or electronically](#).

1	2	3	4	5	6	7	8	9	0
!	@	#	\$	%	^	&	*	(	)

Next we select a word-separator, choose your favorite number on a QWERTY keyboard. For example SHIFT + 4. Finally we combine all the parts, like reading a page, top to bottom, left to right. Capitalise some words, there you go.

**Newsflash\$assimilation\$strumpet\$lunches\$swung\$headlamps\$** + the 6 words on the second page.

## For the math geeks... ;)

Yet another way to choose page numbers, using dice, throw 4 dice (d1, d2, d3, d4) (or one dice 4 times). Subtract 1 from the value of each dice. Thus resulting in values 0-5. Next calculate this number,  $p = (d1 \times 216) + (d2 \times 36) + (d3 \times 6) + d4$ . If  $p < 1292$ , your page number =  $(p \bmod 233) + 1$ . Else try again.

To select the words use one dice for the columns (1-6), done! Next use 3 dice for the rows (d1, d2, d3). Subtract 1 from the value of each dice. Thus resulting in values 0-5. Next calculate this number,  $r = (d1 \times 36) + (d2 \times 6) + d3$ . If  $r < 195$ , your row number =  $(r \bmod 39) + 1$ . Else try again.

THROUGH 20 YEARS OF EFFORT, WE'VE SUCCESSFULLY TRAINED EVERYONE TO USE PASSWORDS THAT ARE HARD FOR HUMANS TO REMEMBER, BUT EASY FOR COMPUTERS TO GUESS.

## Alternative ways to choose strong passwords

Method	Parameters	$C(n,k)$	$n^k$	Pro	Con
BIP39	$n=2048, k=12$	$1.100 \times 10^{31}$	$5.444 \times 10^{39}$	memorable words	small dictionary
EFF Dice	$n=7776, k=12$	$1.011 \times 10^{38}$	$4.887 \times 10^{46}$	easy to implement	
Our Way	$n=54414, k=12$	$1.404 \times 10^{48}$	$6.737 \times 10^{56}$	huge dictionary	difficult to remember

If you are going to store your password, choose media with longevity. TEXT files and/or paper in a safe place. Over time you could also just memorize the 12 words. However, relying solely on memory could be a bad choice. Make sure your password is in a safe place before you start using it. Note: We only store this document for 15 minutes, thereafter this version is gone.
